

Goldman Dermatology is pleased to announce the addition of the Candela Gentlemax cosmetic laser to our practice, the latest technology in laser hair removal. Gentlemax combines two gold standard lasers-GentleLase and GentleYag-to create one unbeatable system. GentleLase, the premier treatment for unwanted hair, is now the gold standard for patients with light skin and dark hair. It can be tuned to treat finer hairs that previously had not responded to older laser modalities. GentleLase utilizes a powerful 755nm beam of concentrated energy which penetrates the skin like it's glass to target the hair follicle. Those with fair skin and dark hair may see permanent reduction in as little as 4 to 6 treatments. GentleYag effectively treats a broad spectrum of skin types, including tanned and darker skin, for permanent hair reduction. Together in one powerful machine, these lasers offer unrivaled flexibility and efficacy.
