

For many men and women unwanted hair can be a nightmare. No one wants to go through painful electrolysis needles, hot wax, sharp razors or smelly hair removal creams. Now, men and women alike can visit Goldman Dermatology to receive the latest treatment for hair removal. IPL Laser Hair Removal, an intense pulsed light laser, gently removes unwanted hair putting an end to all those other painful options.

IPL offers a wide beam that treats larger areas such as the back, shoulders, arms, legs and chest. IPL slows the growing capacity of follicles in the growth cycle at the time of treatment. This means that several treatments are required in order to receive long-term benefits. The number of treatments you may require for optimal benefits depends on the area you wish to have treated and the hair density. We usually recommend 5-6 treatments.

Removing hair with IPL does not make it grow back thicker, darker or quicker. The exact opposite is usually the case. Treatments may cause hair to come back slower and thinner until eventually barely any hair grows back. Treatments are relatively painless but very effective. You can resume normal activities immediately following treatment. The use of sunscreen is recommended on any treated areas exposed to the sun.

IPL is an advanced approach to beautiful skin. Treatments are safe, fast, gentle and effective for hair removal. Schedule your appointment today at Goldman Dermatology and let us make your skin feel smoother and silkier with IPL treatments.
